CLEAN WATER ACT SECTION 401 WATER QUALITY STANDARDS CERTIFICATION FOR REPAIRS TO THE BOLSA-FORRESTAL LEVEE, SEAL BEACH NAVAL WEAPONS STATION (ACOE REFERENCE NO. 2007 – 1090 – YLC)

Dear Mr. Gilligan:

On August 31, 2007, we received an application for Clean Water Act Section 401 Water Quality Standards Certification (Certification) for repairs to erosion of the Bolsa-Forrestal Levee, located at the Seal Beach National Wildlife Refuge within the Seal Beach Naval Weapons Station. This letter responds to your request for certification that the proposed project, described in your application and summarized below, will comply with State water quality standards outlined in the Water Quality Control Plan for the Santa Ana River Basin (1995) and subsequent Basin Plan amendments:

Project Description: Placement of rock-slope protection over the re-constructed Bolsa-Forrestal Levee. This Levee was installed as part of the Port of Long Beach's Anaheim Bay restoration project. The primary function of the Levee is to direct tidal flow from Anaheim Bay into the northern most restoration cells on the Seal Beach National Wildlife Refuge, as well as to protect the Belding's savannah sparrow habitat present within the adjacent Bolsa wetland cell. The Levee has eroded over time as the result of a combination of tidal current-induced scour and wind-driven wave action. The Levee is located in Section 12 of Township 5 South, Range 12 West of the U.S. Geological Survey *Seal Beach, California* 7.5-minute topographic quadrangle map (33 deg. 44.73 min. N/-118 deg. 05.00 min W).

California Environmental Protection Agency

Recycled Paper

Receiving water: Seal Beach National Wildlife Reserve Wetlands.

Fill area: 0.164 acres of permanent impact to wetland shoreline (377 linear feet total).

Dredge/Fill volume: N/A

Federal permit: U.S. Army Corps of Engineers Nationwide Permits No. 3 and 13.

Should the proposed project impact state- or federally-listed endangered species or their habitat, implementation of measures identified in consultation with U.S. Fish and Wildlife Service and the California Department of Fish and Game will ensure those impacts are mitigated to an acceptable level. Appropriate Best Management Practices will be implemented to reduce construction-related impacts to Waters of the State. This project will occur in an area that is less than one acre. Therefore, coverage under the State Water Resources Control Board's General Permit for Storm Water Discharges Associated with Construction Activity, Water Quality Order 99-08 DWQ, is not required.

Construction de-watering discharges, including flow diversions, are regulated under Regional Board Order No. R8-2003-0061, General Waste Discharge Requirements for Discharges to Surface Waters that Pose an Insignificant (De Minimis) Threat to Water Quality. For more information, please review Order No. R8-2003-0061 at www.waterboards.ca.gov/santaana/pdf/03-61.pdf.

On August 23, 1993, the Governor of the State of California developed the California Wetlands Conservation Policy (Wetlands Policy). The State Wetlands Policy adopted a goal to "ensure no overall net loss and achieve a long-term net gain in the quantity, quality, and permanence of wetlands acreage and values in California in a manner that fosters creativity, stewardship and respect for private property". The Regional Board adopted the State Wetlands Policy in the Water Quality Control Plan for the Santa Ana River Basin (1995).

The project proposes to impact wetlands that are a part of the Seal Beach National Wildlife Refuge, which protects one of the last remaining natural salt marshes in Southern California. As discussed in their August 31, 2007 letter, the U.S. Fish and Wildlife Service (Service), in coordination with the U.S. Navy, has been engaged in the protection and enhancement of wetlands within and outside of the current boundary of the Seal Beach National Wildlife Refuge since the establishment of the Refuge in 1974. Although a large portion of the restoration efforts completed to date in the Refuge have been part of compensatory mitigation for wetlands impacts associated with a variety of

projects, the Service and the Navy have also voluntarily restored over 150-acres of wetlands. In addition to targeted restoration efforts, on-going management has resulted in the reestablishment of sensitive wetland areas within Anaheim Bay.

Additional work to further improve wetlands is planned in the Navy's Integrated Natural Resources Management Plan and the Service's pending Comprehensive Conservation Plan. While the proposed project will result in impacts to wetlands habitat, in consideration of past and future work by the Service and the Navy, Regional Board staff does not believe that there will be a *net loss* of wetlands in terms of either acres or functions and values.

You have applied for Nationwide Permits from the U.S. Army Corps of Engineers in compliance with Section 404 of the Clean Water Act. You have submitted a Negative Determination to the California Coastal Commission and received approval from the U.S. Navy. The Service has determined that the project is categorically excluded from the requirements of the National Environmental Policy Act (NEPA) and that there will be no take of federally listed species. The Executive Officer has determined that the project qualifies for Class 1 and Class 3 Categorical Exemptions from the California Environmental Quality Act (CEQA), pursuant to Section 15301 and 15303 of the CEQA Guidelines, in Title 14 of the California Code of Regulations.

This 401 Certification is contingent upon the execution of the following conditions:

- 1) The discharger must implement an effective combination of best management practices to reduce pollutants in storm water and non-storm water discharges from the project site to the maximum extent practicable using best available technology and best conventional technology.

Under California Water Code, Section 1058, and Pursuant to 23 CCR §3860, the following shall be included as conditions of all water quality certification actions:

- (a) Every certification action is subject to modification or revocation upon administrative or judicial review, including review and amendment pursuant to Section §13330 of the Water Code and Article 6 (commencing with Section 3867) of this Chapter.
- (b) Certification is not intended and shall not be construed to apply to any activity involving a hydroelectric facility and requiring a FERC license or an amendment to a FERC license unless the pertinent certification application was filed pursuant to Subsection §3855(b) of this Chapter and that

application specifically identified that a FERC license or amendment to a FERC license for a hydroelectric facility was being sought.

- (c) Certification is conditioned upon total payment of any fee required under this Chapter and owed by the applicant.

Although we anticipate no further regulatory involvement, if the above stated conditions are changed, any of the criteria or conditions as previously described are not met, or new information becomes available that indicates a water quality problem, we may formulate Waste Discharge Requirements.

In the event of any violation or threatened violation of the conditions of this certification, the violation or threatened violation shall be subject to any remedies, penalties, process or sanctions as provided for under state law. For purposes of section 401(d) of the Clean Water Act, the applicability of any state law authorizing remedies, penalties, process or sanctions for the violation or threatened violation constitutes a limitation necessary to assure compliance with the water quality standards and other pertinent requirements incorporated into this certification.

In response to a suspected violation of any condition of this certification, the Santa Ana Regional Water Quality Control Board (Regional Board) may require the holder of any permit or license subject to this certification to furnish, under penalty of perjury, any technical or monitoring reports the Regional Board deems appropriate. The burden, including costs, of the reports shall be reasonable in relation to the need for the reports and the benefits to be obtained from the reports.

In response to any violation of the conditions of this certification, the Regional Board may add to or modify the conditions of this certification as appropriate to ensure compliance. Pursuant to California Code of Regulations Section 3857, we will take no further action on your application. Please notify our office five (5) days before construction begins on this project.

This letter constitutes a Water Quality Standards Certification issued pursuant to Clean Water Act Section 401. I hereby issue an order certifying that any discharge from the referenced project will comply with the applicable provisions of Sections 301 (Effluent Limitations), 302 (Water Quality Related Effluent Limitations), 303 (Water Quality Standards and Implementation Plans), 306 (National Standards of Performance), and 307 (Toxic and Pretreatment Effluent Standards) of the Clean Water Act, and with other applicable requirements of State law. This discharge is also regulated under State Water Resources Control Board Order No. 2003-0017-DWQ (Order No. 2003-0017-DWQ), "General Waste Discharge Requirements for Dredge and Fill Discharges That Have Received Water Quality Certification" which requires compliance with all

conditions of this Water Quality Standards Certification. Order No. 200-0017-DWQ is available at www.swrcb.ca.gov/resdec/wqorders/2003/wqo/wqo2003-0017.pdf

Should there be any questions, please contact Adam Fischer at (951) 320-6363, or Mark Adelson at (951) 782-3234.

Sincerely,

GERARD J. THIBEAULT
Executive Officer
